
My Environmental Tiny House

- Hammock: Easily produced, space-saving, chair made out of organic materials.
- Tub: Water efficient way to washcloths
- Wood Fire Oven: I will have control over how the fuel is produced.
- Used sink: No waste from production
- Futon Frame: I only need one item of furniture for a bed and a couch. I can also build this out of trees fallen by bad weather.
- Vegan Avocado mattress and Pillows: Sustainable and comfortable way to sleep.
- Organic cotton Sheets: Warm and sustainable.
- Composting Toilet: Saves water and in a few years I can use it to fertilize plants.
- Bamboo Shower Curtain: Quick replenishing plant which can be grown organically and contains no polymers.
- Hand-Woven Rug: This is a great way to use cloths that are too torn up to donate.
- LED lights: Energy-efficient and long-lasting
