Our 5 Minute Presentation

Today, we were challenged to share our voice with our friends to spread awareness of the benefits of soil to our friends!

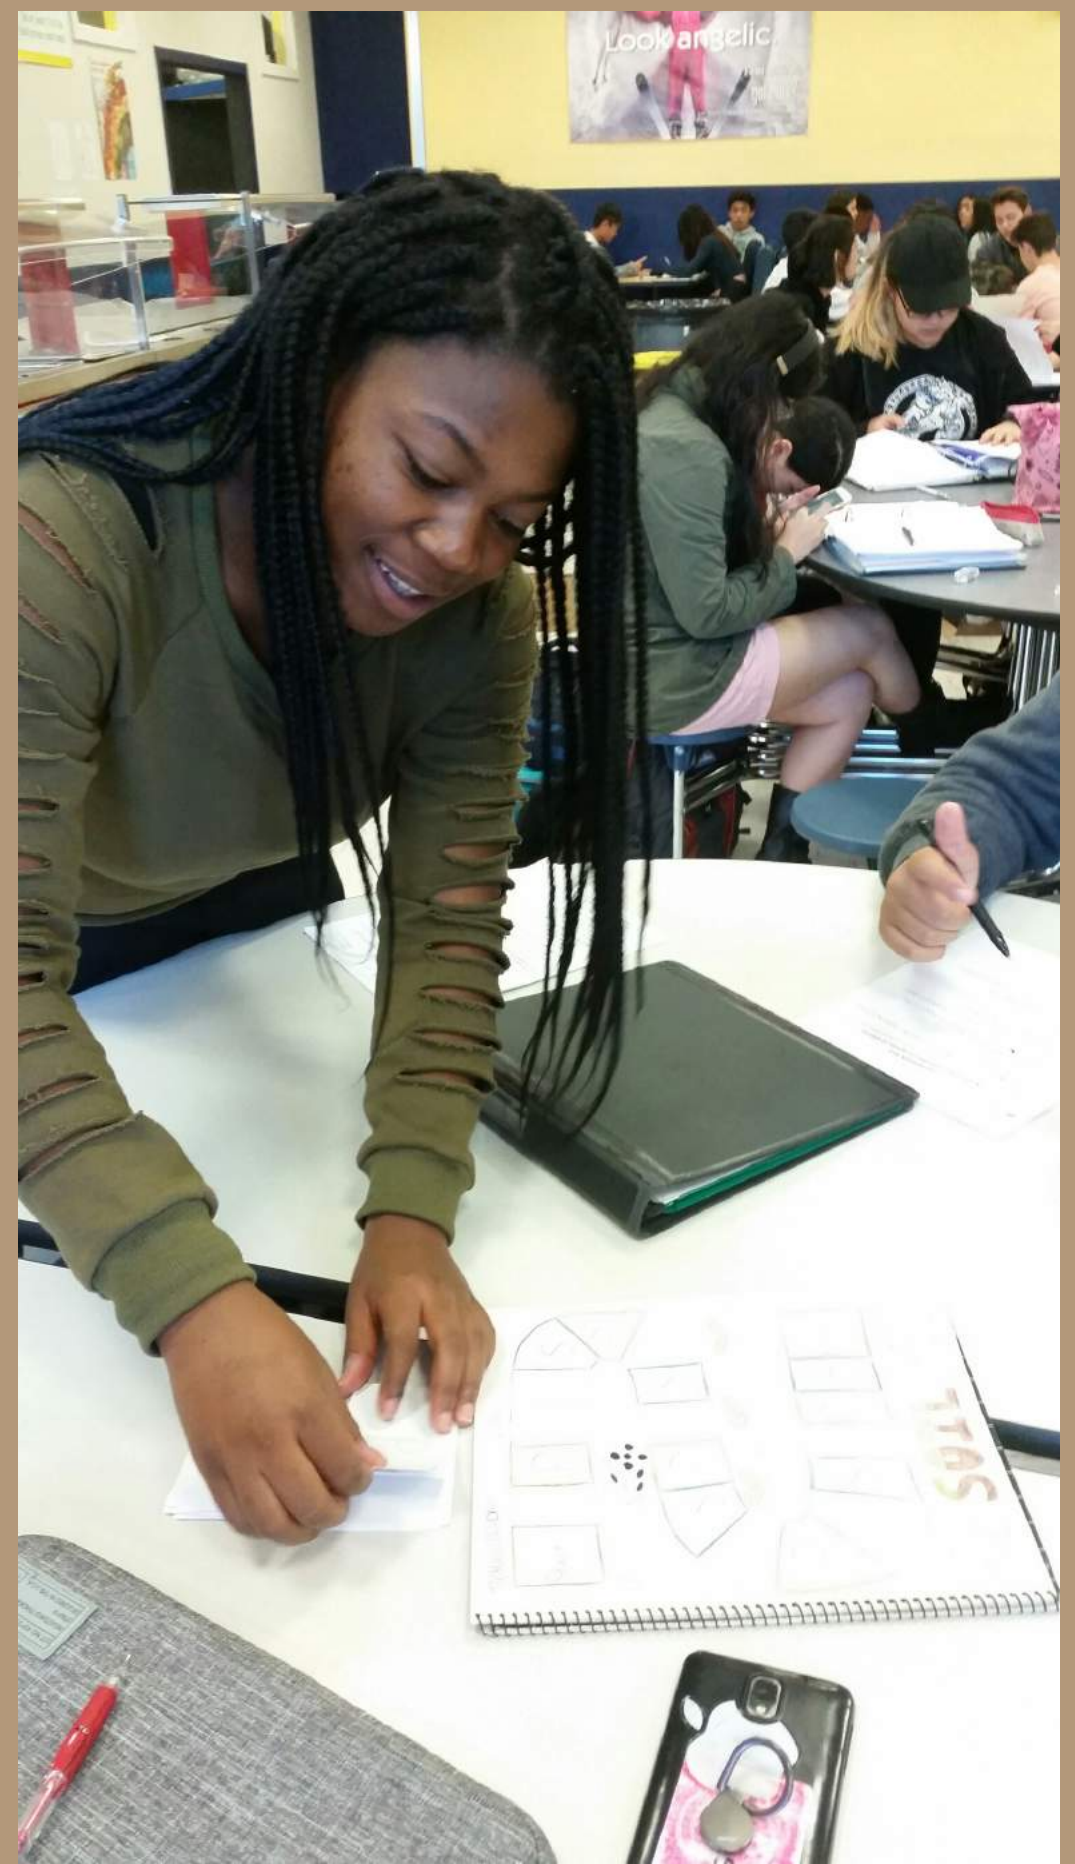

We decided to teach this information in the form of a game, due to studies that have shown that people retain more knowledge when they are taught through a game. Unfortunately, we were unable to present to our class, but we were able to educate 7 of our friends in total, three or two people at a time.

We kept the game short so that we would have time to answer our friend's questions and to simply talk to them about what they can do to help this cause

Responses/ Feedback

Our "students" were really interested in this topic, which made us so happy! After the game was played and we presented the importance of soil to them, they all wanted to know how they could help! One of our friends who played the game said, **"I thought the game was fun and it was a great way to learn about the benefits of soil!"**

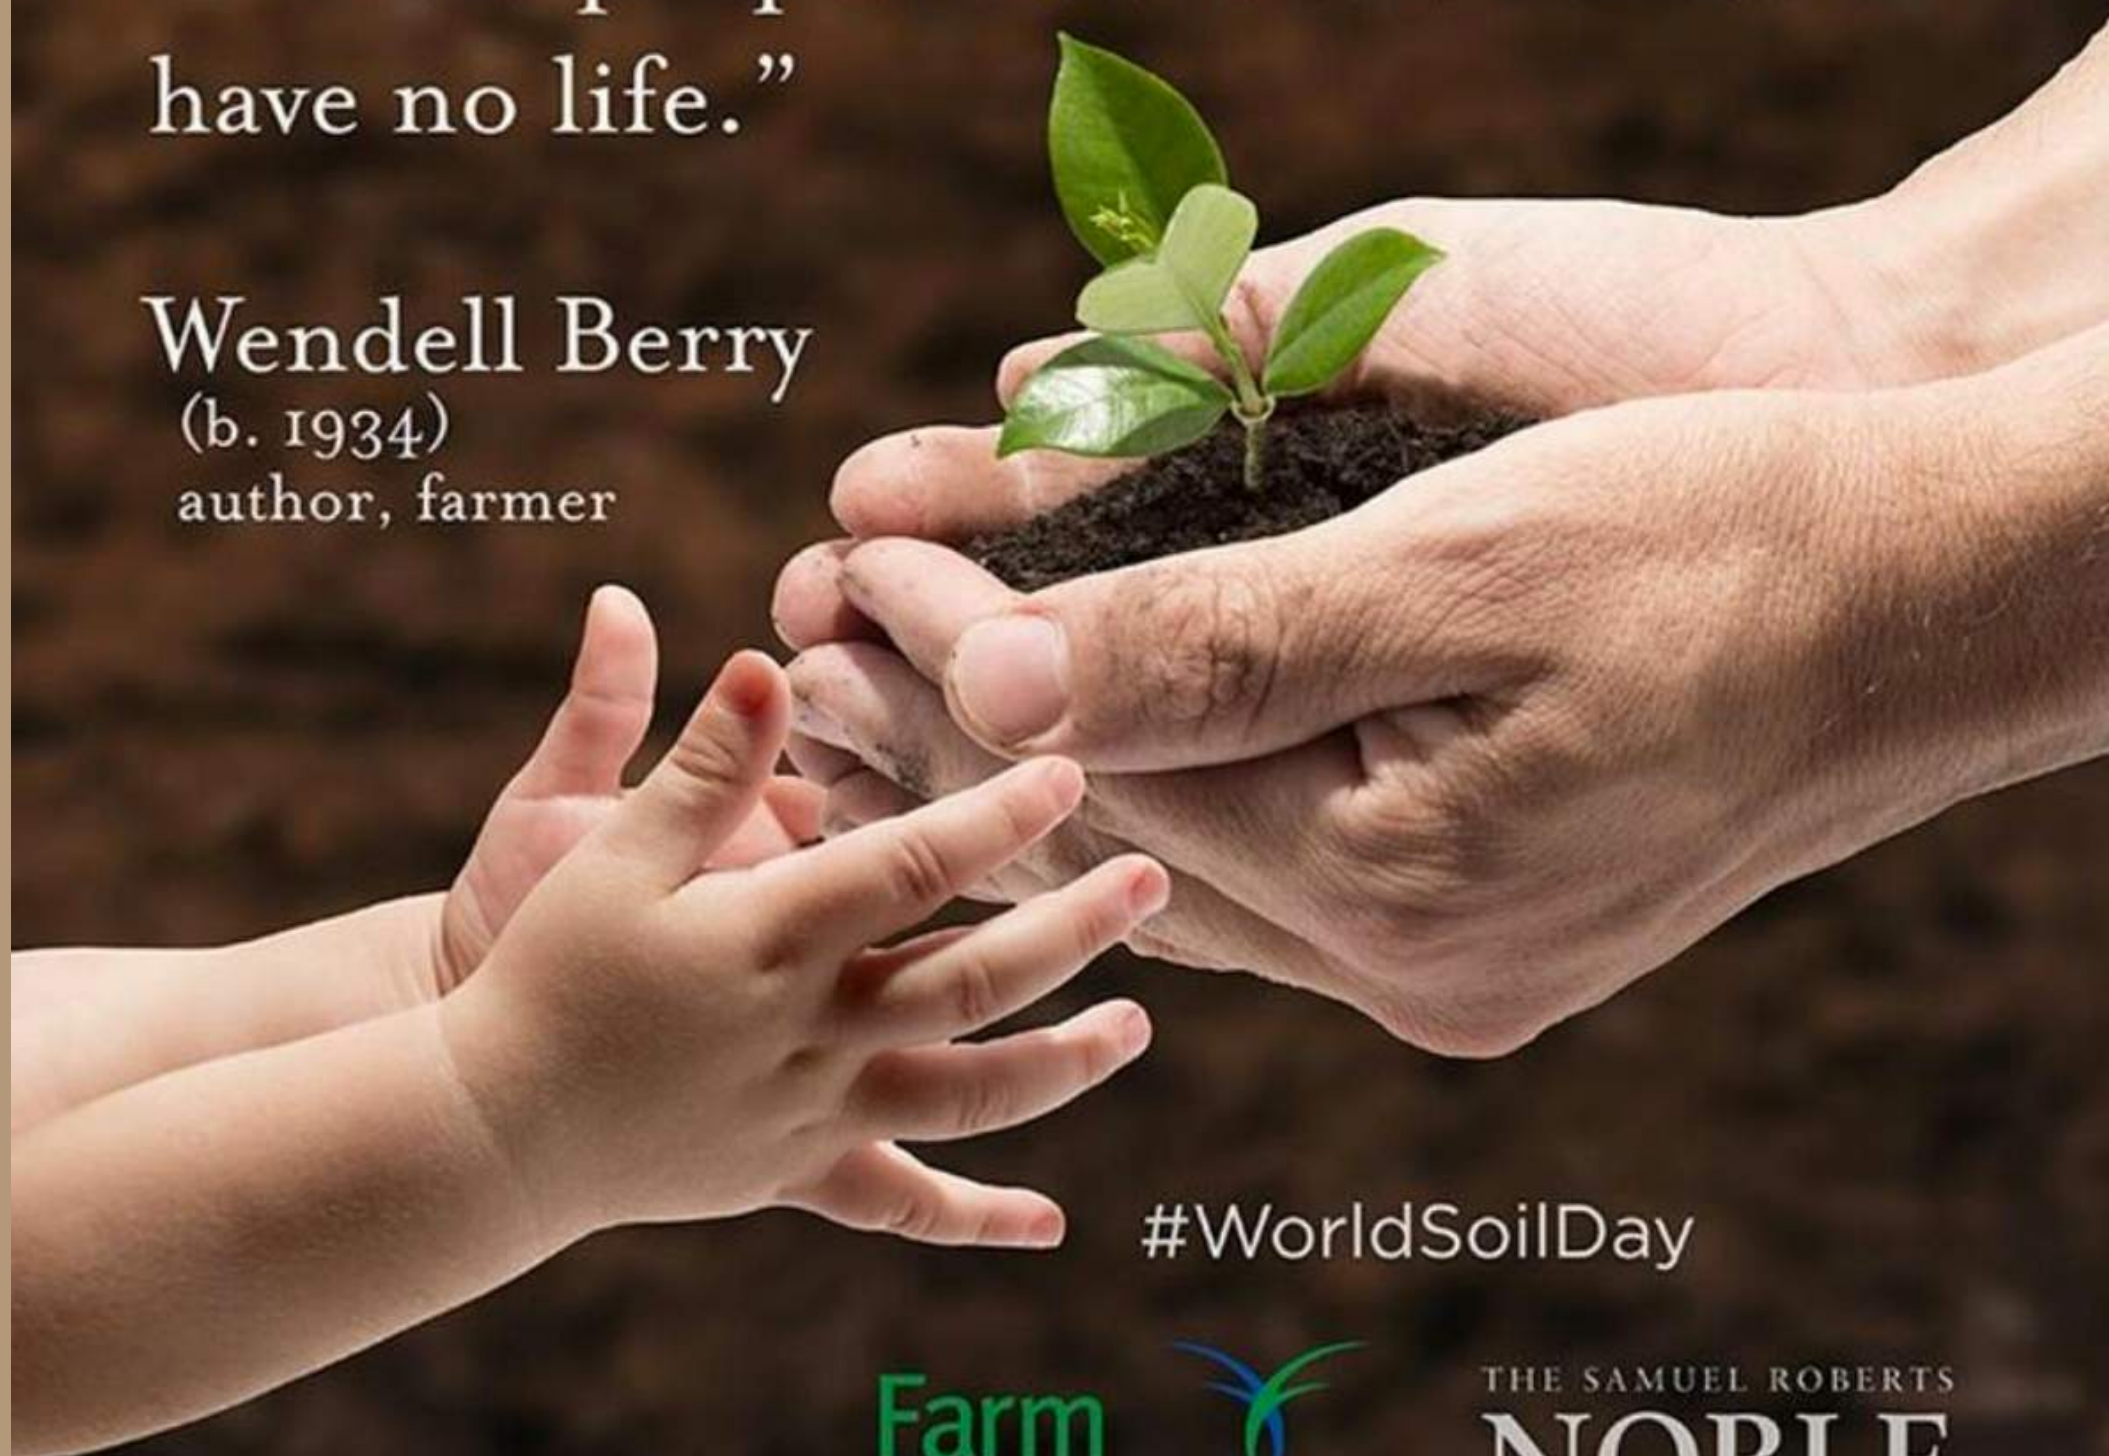

Being a Teacher

The experience of teaching was so rewarding and very empowering! It helped me realize the influence I have on others. I also loved watching my friend's realize and understand how important soil is to the earth and now that they know, they can also become teachers. This was an amazing experience!

Social Media Post

"The soil is the great connector of lives,
the source and destination of all ...
Without proper care for it, we can
have no life."

Wendell Berry
(b. 1934)
author, farmer

the.green.queens

the.green.queens Today, we learned so much about the positive impact of soil that inspired us so much! We learned that the solution to climate change is right under our feet. However, due to human impacts of deforestation, soil is in danger. We need soil because it takes in carbon that would otherwise be released into the environment! Soil is the basis of our lives. We need to come together to help rejuvenate our soil! Picture from noble.org
