# DIY house cleaning product

We made a DIY natural cleaner for the kitchen using baking soda, vinegar, and water.

# Recipe

Two parts baking soda

One part water

Enough vinegar to cover entire surface

Combine the baking soda and water until you create a spreadable paste, then put on surface and let dry. After dried, dump vinegar on surface, allow reaction to occur, and then wipe off.

## Final product

Final product is a spreadable paste

Spread on different surfaces and  
allow to dry

# Result

Smell:

- The product smelled better than normal cleaning products
- No chemical smell
- Vinegar is a natural deodorizer
