Day 26 - Eco Hero

For this challenge I was able to be a hero my self, an eco hero to be exact. The past couple days/weeks have been an amazing experience for me. I have learned facts about issues that I didn't even know their existence. I anyone would tell me anything about GMOs a few days ago I would think that its a new game on the ps4. However these challenges have increased my awareness about environmental issues an I am grateful for that, because now I know that I can make a change. My favorite challenge so far must of been from day 10, Water although I really enjoyed Fashion too.

It is just unbelievable to know how many gallons of water we consume daily without knowing. Since that challenge, I was able to reduce my daily consumption of water by changing my nutrition and more careful. And I was also able to reduce the consumption of the house by 10 000 gallons which I am really proud of. But the next step is to change others too.

I thought that changing only my friends won't be enough. So my plan is to change all the students of school habits and my school it self as a building. To do that I was thinking of having an assembly and have them all check their daily water footprint. Then have a little discussion, answer a few questions, give them an inspiring message. But I thought that even that wont be enough, so I decided to start a movement, a little revolution just like Ron Finley. So I thought going up to my neighbors and with them calculate their water consumption and hopefully by the end of my visit they would consider to even change a few of their habits.

I also posted a picture of my self being an eco hero:

greenvisionpgc Hey everyone, I am starting a movement on reducing water consumption in my environment and hopefully one day globally. Make sure to keep up with my achievements and projects, thank you all for the support! 💚 🌱 #pgc2017 @turninggreenorg #ecohero @zoehupsel #reducewaterconsumption
