

Brenna Base

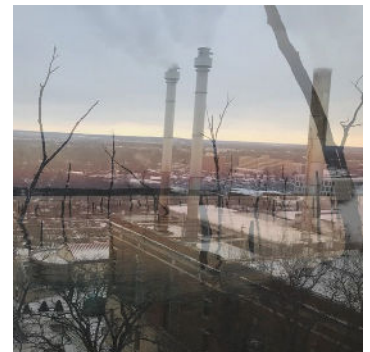

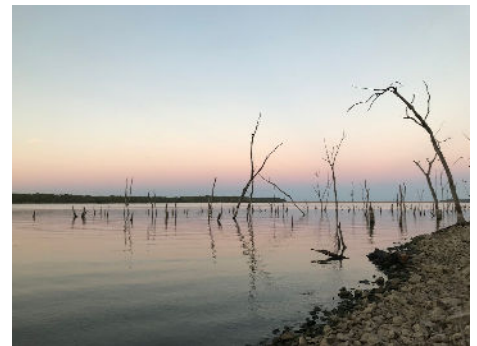

Challenge Day 1

Greenest

10/01/2018

Why?

The first photo is a picture taken through the window of a library on my college's campus library while the second is of Clinton Lake State Park at sunset. In the first picture, you can see the pollution coming off from one of the college's many buildings. This is how I view today: full of pollution. The second photo shows no signs of pollution. There is not a single boat on the lake (although there usually is) even though the waters are still enough to sleep on.

1. Write an inspiring caption with your thoughts about how the photos capture the world we live in today, and the world you hopes for tomorrow.
  - a. Today we wake up in smog, tomorrow we swim in clean air. This photo represents the discontinuity between the polluted world we live in and the natural world the Earth wishes to be in. My hope for the future is that we make our way towards less pollution and create a more natural environment.
2. Post your photo to instagram or facebook with your caption. Tag @natgeo and @turninggreenorg and hashtag #empathygap and #PGC2018. If you found images online be sure to credit those photographers in the caption.
