PANAMÁ, Nathan Foods Corporation S.A., Calle 2da, Local 15 Juan Díaz, Tel.: (507) 2174505, Ciudad de Panamá.
Contenido Neto: 3 Litros.

These images were taken from <https://www.exito.com/products/0002784480760769/detergente-liqecolo> because there were no stocks of the product in the Almacen Exito we visited.

Anionic surfactants:

One of the main problems caused by the use of detergents is that commercial ones must contain certain additives that can turn into serious water pollutants. Among the main additives are small amounts of perfumes, bleaches, optical brighteners, and foaming agents; It is important to emphasize that the foam production of a detergent is determined by the type of surfactant it contains, thus in this way, the anionic surfactants produce abundant foam, in addition to the foam formation is helped by certain additives foaming that are added to the formula, since people tend to relate the capacity of foam production with the cleaning capacity, although the production of foam has nothing to do with the effectiveness of the detergent.

My opinion:

This is a green washing product because although it claims to be "friend of the environment" it has chemical compounds that help to contaminate the water. Sometimes we let ourselves

be guided by the publicity that seems to be so real about the brand's commitment to the environment, and in this case, the product is still causing an impact on natural resources.

Food ítem:

Antifoaming agents:

(Dimethylpolysiloxane) It is an industrial chemical used in waterproofing and sealants. This component is mostly used in fast food chicken nuggets and eggs. Also, pay attention to TBHQ, a petroleum derivative, which is used as a stabilizer in perfumes, resins, varnishes and petroleum chemicals in the field and linked to stomach tumors and DNA damage.

My opinion:

It is a green washing product. The products that have the longest useful life are those that most harm human life, in our case tea that seems to be healthier than soda, alcoholic drinks and bottled juices but these also have a bad impact on our body. Personally, this finding surprises me and I have always preferred tea to any other drink.

Body product:

Aluminum chlorohydrate:

Some deodorants use aluminum salts as antiperspirants, which should appear in the list of ingredients. The production allows up to 20% concentration, which is usually in the form of aluminum chlorohydrate, aluminum pentachlorohydrate or alum stone.

There are many doubts about the presence of aluminum in health plans, in particular, about the relationship with breast cancer or hormonal contamination. In addition, a risk of damage to the central nervous system.

My opinion:

This is also a green washing product, but to a lesser extent, because Ax is developing products that contain less chemicals that affect the environment, although prices differ significantly from other products, it is good to take part in changing our model of lifetime. Personally, I have almost never used aerosol products for the care of my body.

Mr. Tea Limon	Té Organico Matcha
