My mom brought her Way to Grow Leave-In Conditioner. It is a number 8 on the Think Dirty App. It has 4 potentially hazardous chemicals in it. The top two are fragrance and diazolidinyl urea. Diazolidinyl urea can cause skin irritation, may trigger eczema, and it is a formaldehyde releasing agent.

This was my mother's product, and she said "No way! Formaldehyde? That's what they put in dead people." She then went on to say that she is a little freaked out!

My dad brought his Barbasol shaving cream down and we found out that it also has a rating of 8 on the Think Dirty App. It has 6 potentially hazardous ingredients. The top two were the exact same as the leave-in conditioner.

When I told my dad that his shaving cream also had a chemical that is a formaldehyde releasing agents, he said, "I know, that sucks. Thanks mom." Then he said a sarcastic, "Oh my gawdd".

We decided to do a hair growth treatment, since my mother no longer wants to use her product. Below is the recipe.

RICE WATER SUPER HAIR GROWTH TREATMENT

Used as a scalp treatment, deep conditioning treatment or as a leave in rinse.

Ingredients:

2 cups of water

2 tablespoons of rice

Peel of an orange

Instructions:

1. First since the rice well in water to get rid of any contaminates and dust.

2. Put two tablespoons of rice in a contained.

3. Add 2 cups of water.

4. Knead it with your fist, to help release the amino acids and patera which will help the nutrients to seep out of the rice into the water. This will help strengthen the hair and add shine.

5. Add a peel of an orange, so it doesn't smell like rice.

6. Let it sit for 30 minutes.

7. Strain it into a new bowl.

8. Pour the mix into a spray bottle and add water to it so it isn't too potent.

9. After you shower, apply the spray to your hair.

10. Scrub it in and leave it overnight.
