

DIY HONEY AND CINNAMON LIP SCRUB

Homemade Cosmetic

Ingredients!

Brown sugar- pantry

Coconut oil- bathroom

Raw unfiltered honey- pantry

Cinnamon powder- pantry

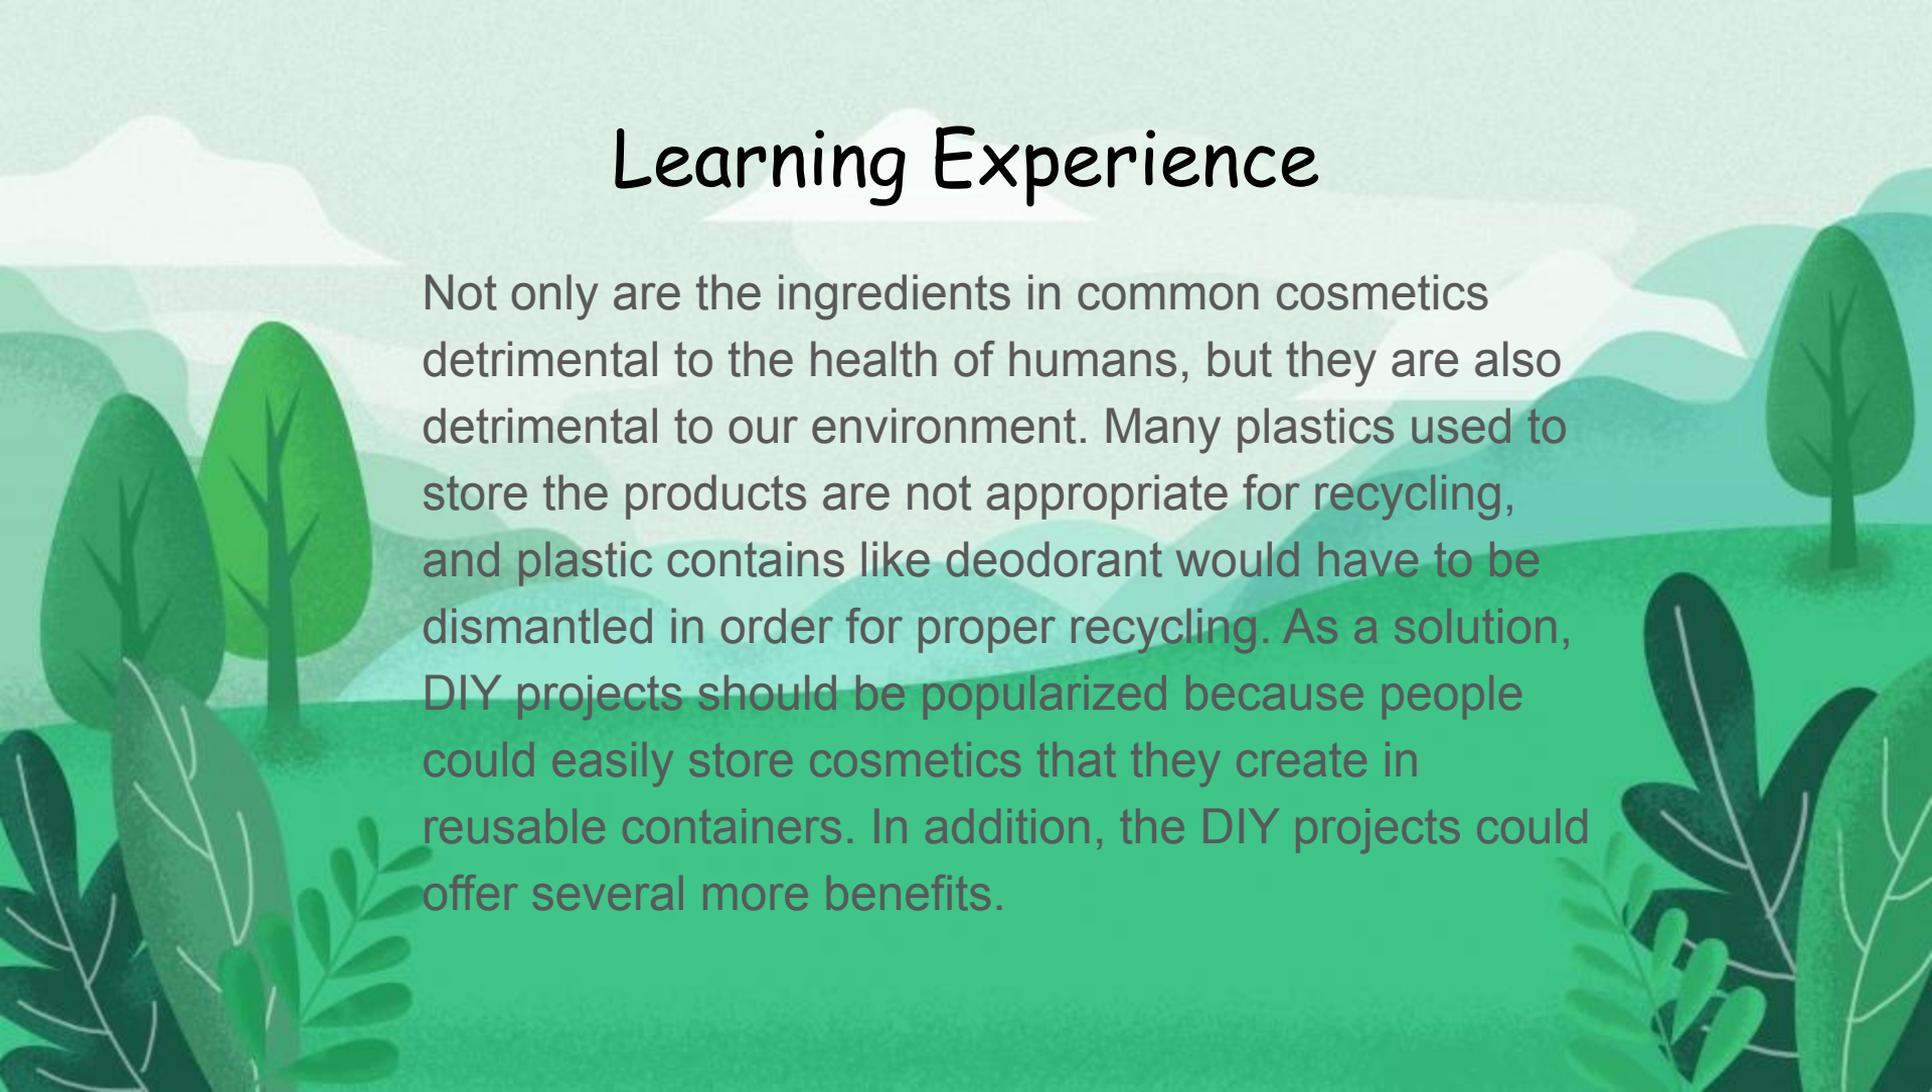

Leftover Coconut Oil Jar

Learning Experience

Before I encountered this challenge, I had no idea that there were so many harmful chemicals in everyday cosmetics. I had no idea that that the petroleum-based vaseline jelly I use could potentially have dioxane 1, 4 which could lead to cancer. Additionally, I had thought that the “All Natural” really meant all natural; however, I know that companies are legally permitted to making these false claims. After knowing that the “All Natural” products I use may be far from it, I understand that the best options for my health are to either make my own cosmetics or buy certified organic certified.

Learning Experience

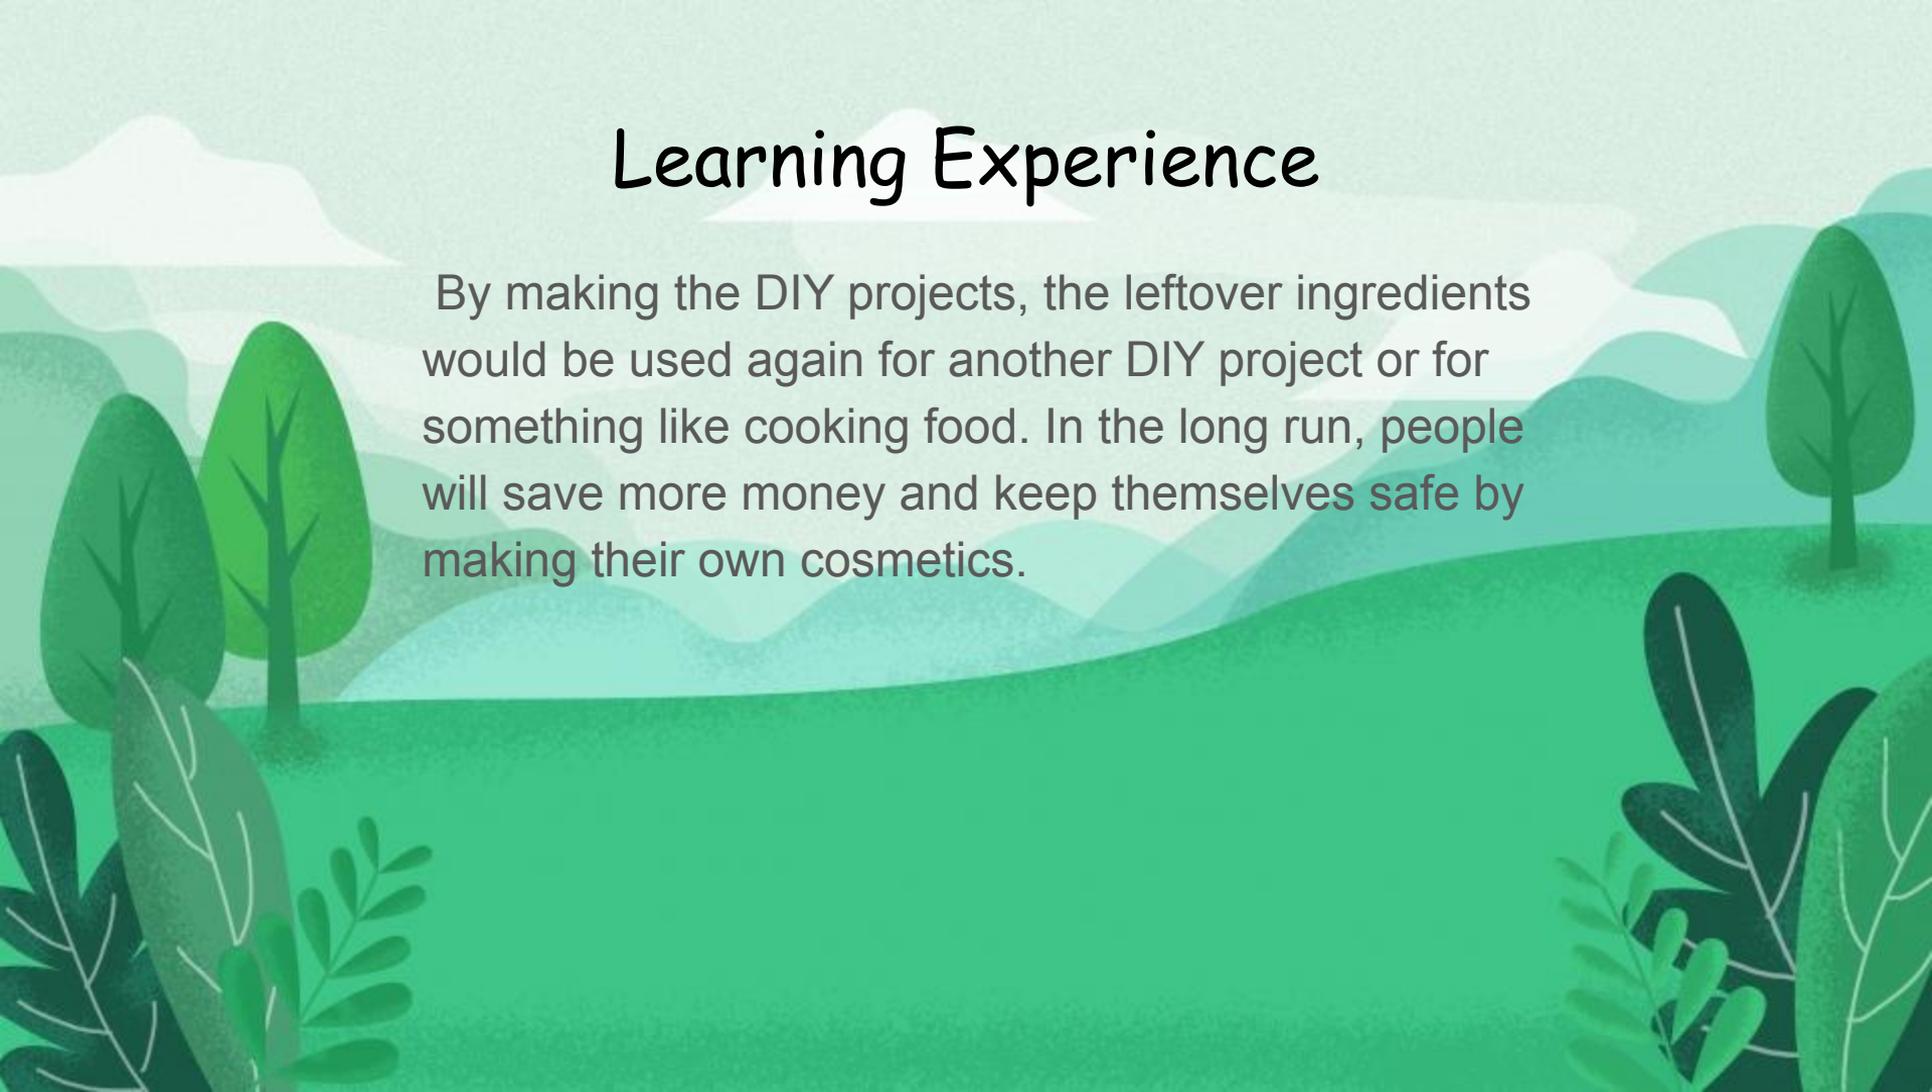

Not only are the ingredients in common cosmetics detrimental to the health of humans, but they are also detrimental to our environment. Many plastics used to store the products are not appropriate for recycling, and plastic containers like deodorant would have to be dismantled in order for proper recycling. As a solution, DIY projects should be popularized because people could easily store cosmetics that they create in reusable containers. In addition, the DIY projects could offer several more benefits.

Learning Experience

Although people may not know the ingredients in store-bought cosmetics, they can easily identify the products that they use. Therefore, they could benefit from their product while steering clear from harmful chemicals both at the time. DIY projects are also more cost-effective than buying products from the store. Since most cosmetics can be made from things that are often found in people's homes, it could be free to make a healthcare product. If someone did have to buy their ingredients at the store, the person would still save more money than buying cosmetics.

Learning Experience

The background of the slide is a vibrant green landscape illustration. It features rolling hills in various shades of green, from light to dark. There are several stylized trees: two on the left, one on the right, and some leafy plants in the foreground. The sky is a pale, light green with soft, white, cloud-like shapes. The overall aesthetic is clean, modern, and nature-inspired.

By making the DIY projects, the leftover ingredients would be used again for another DIY project or for something like cooking food. In the long run, people will save more money and keep themselves safe by making their own cosmetics.
