the Great Diasket  
to rebuild th  
y and fell in love with it.

I want to create a living space that saves space and maximizes utility. This photo inspired me because of how the desk can be pulled out of the bed, which is great for smaller bedrooms like mine.

GO (Greenshield Organic) products are listed in turninggreen's back to school checklist. Next time I buy cleaning supplies, I plan to buy GO, because they are organic and packaged in sustainable bottles!

This is a photo of a Naturepedic mattress. The brand is MADE SAFE certified and is 100% organic and produced ethically with fair labour! I would also imagine that laying in this bed would feel so comfortable!

I live in an apartment, so I can't have a garden. Right now I own a few houseplants, but I want to have a collection like this someday! I love my houseplants and I think they bring a lot of life into a city home.

My home has a tiny balcony like this one, although my family and I don't really use it for anything. The view in this photo seems beautiful -- eating meals like this would be so fun and refreshing!

This bedroom seems very cozy, and houseplants make the best decor because they're natural. The drawer under the bed makes good use of space and the dog is adorable!

This desk uses a minimal amount of wood and it seems to be very simple to build. I'm not sure whether it can be folded up against the wall to save space but that would be very cool!

I like the containers that are being used to store the clothing and the shoes because I'm normally very unorganized with my clothing. A small and compact wardrobe also has a smaller environmental footprint!

These West Elm blankets are 100% organic cotton -- which means that they were not genetically modified or grown with pesticides, so they're better for the skin. They also look extremely comfy.

I'm very dependent on my phone and my laptop in my daily life. Powering them using energy from the sun is very eco-friendly and it also gives me an excuse to study outside!

This comforter from The Company Store was recommended in turninggreen's back to school checklist. I would feel good buying this product because it has been certified by the Responsible Down Standard, meaning it sources all of the down responsibly and ethically.
