---

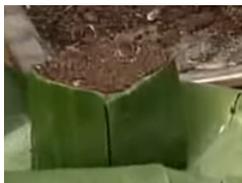

Planting is my specialty because my dad had taught me since I was a kid. I really like planting and because of that, I had created a little garden on my balcony. I grew a lot of leafy vegetables and some of my favorite plants as well such as cactus! But, I do think that this is not enough because there are a lot more free spaces in front of my apartment. For this challenge, I want to expand my little garden so that my apartment mates can access the greens as well.

I choose the vegetable or sprouts that I want to plant from my apartment's mates' choices such as spring onion, salad, bok choy, chili, chia sprout and cucumber. These vegetables or sprouts are very helpful for us because we can use them for our daily meal as well as improving our health as they are very organic. Salad, chia sprout and spring onion can be put in salad, bok choy and cucumber can be lightly stir fried and chili can be used as condiment. Having our own garden is very important for the soil as we won't be using chemical fertilizer that is highly dangerous for the microorganism in the soil and we can reuse the soil for later plantation. Moreover, we also help the climate change issues by not purchasing too much food from outside, reducing the demand market, decreasing the cultivation of vegetables.

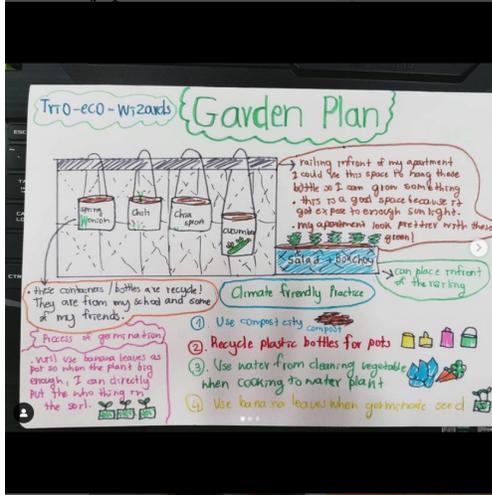

In front of my apartment, there is a railing that can be used to hang something. I was thinking of using the railing to grow my vegetables. I think it is a very good space because the railing gets exposed to the sunlight pretty fine and these greens will make my apartment look prettier.

Climate-friendly practices that I am taking into account are germinate seeds with banana leaves pot (as shown below), using compost from Compost City business where they generate kitchen waste in Phnom Penh to compost that can be use for planting, reuse water from cooking to watering plant and recycle plastic bottles by cutting them in half, make drainage holes and use them as pots for my plants.

I really enjoy making this garden plan and I am very happy to share this plan to my other friends who have railing in their house, so they can practice some friendly gardening.

*(banana leaves as pot for seed germination)*
