Day 12 – Greenest

PGC_TAHLIA

Posts

pgc_tahlia Our oceans are vital for our survival. They connect continents, regulate our climate, and provide us with food, oxygen and employment. Our actions are having real and direct consequences of the ocean, and they are happening right now. Ocean acidification, rising sea levels, coral bleaching events, rising sea temperatures and unbalanced ecosystems are all occurring as a result of our unmitigated actions.

Why take from the ocean when we can work alongside it? We have the power to create actionable change and help protect our oceans and the benefits they provide:

- choose plastic free alternatives: these often end up in our oceans and are consumed by marine organisms. They then are consumed by us!
- support sustainably sourced seafood: unsustainable fishing can greatly impact the health of the oceans and ecosystems, taking more resources than the ocean can balance out and injuring or killing unrelated species
- vote! Vote for policies and parties that stand with the oceans rather than supporting their destruction.
- support companies that support our oceans

Together we can help to preserve such precious and abundant resources!
