HAWAIIAN MONK SEAL

MONACHUSSCH AUINSLANDI

A native of the Northwestern Hawaiian Islands, Hawaiian Monk Seal is one of the earless seals who live on warm beaches, unlike other seals.

ENDANGERED

This endangered marine mammal is one of the two remaining in this species-monk seal- along with the Mediterranean monk seal.

BAD NEWS

The third species from this family, the Caribbean monk seal, has already disappeared from the planet.

OUR MEANS

These seals are threatened by commercial hunting for meat, oil, and skin, attack from predators including tiger sharks, marine debris, and entanglement in fishing nets.

DATA

According to recent research, only 1,400 Hawaiian Monk Seal remain on the Islands.
