

# Day 13 – Greener

## **Necessary Information**

Name: Md. Mahfuzul Islam

Username: MahfuzulIslammegh

School: Jahangirnagar University

Insta\_Id: mahfuzul\_islam\_megh

## **Problem**

Dhaka city only contains 8% green space.  
This is the second most polluted city in the world.  
The air is heavily polluted.

## **Emergency need**

New green space is mandatory in Dhaka city.  
But there is not enough space for creating green spaces such as parks or community gardens.  
More than 47% of the city is occupied by buildings.  
The majority of them have a concrete rooftop.

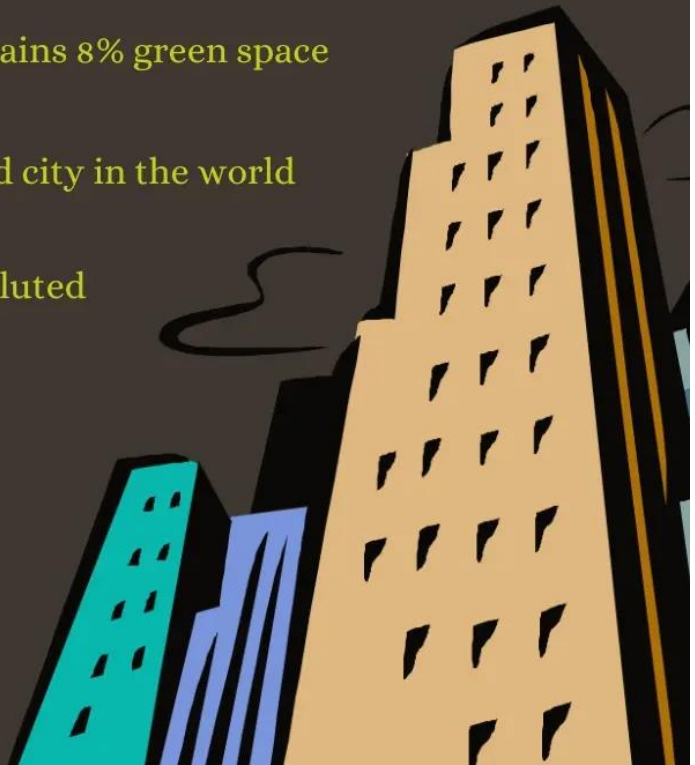

## **Solution**

Rooftop gardens can be an excellent solution.  
Each building that has a concrete rooftop can practice rooftop gardening.  
Different kinds of plants can be grown according to different types of rooftops.

## Real content (Visual story)

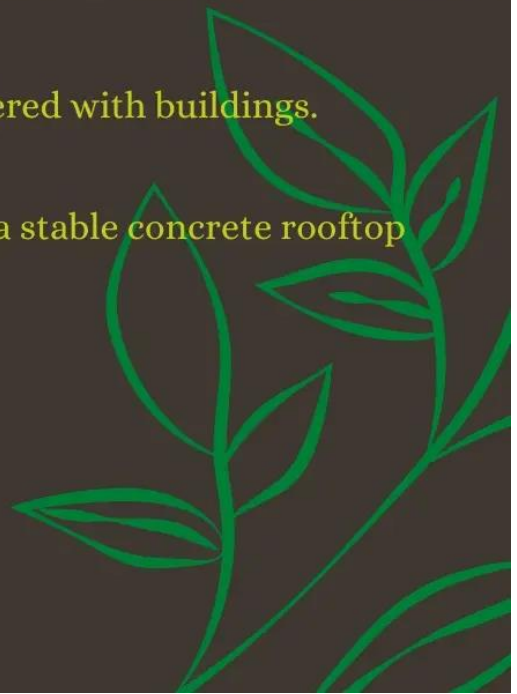

# *The problem*

- ① Dhaka city only contains 8% green space
- ② second most polluted city in the world
- ③ The air is heavily polluted

# ***Facts***

- 1** Green space is mandatory.
- 2** Not enough available space to create parks or community garden.
- 3** 47% of the city space is covered with buildings.
- 4** The majority of them have a stable concrete rooftop

# ***Solution***

- ① Rooftop gardening can be applied.
- ② Each building that has a concrete rooftop can practice rooftop gardening.
- ③ Different kinds of plants can be grown according to different types of rooftops.

mahfuzul\_islam\_megh Dhaka, the capital city of Bangladesh is under a serious crisis of green space. It occupies only 8 percent of the green space in it. But there is not enough space available where new green spaces like parks or gardens can be created. In this situation, rooftop gardening can be an excellent way to solve or at least improve the situation.
