

GREENER
40 POINTS
CHALLENGE

- Do you have sustainable buildings in your neighborhood?

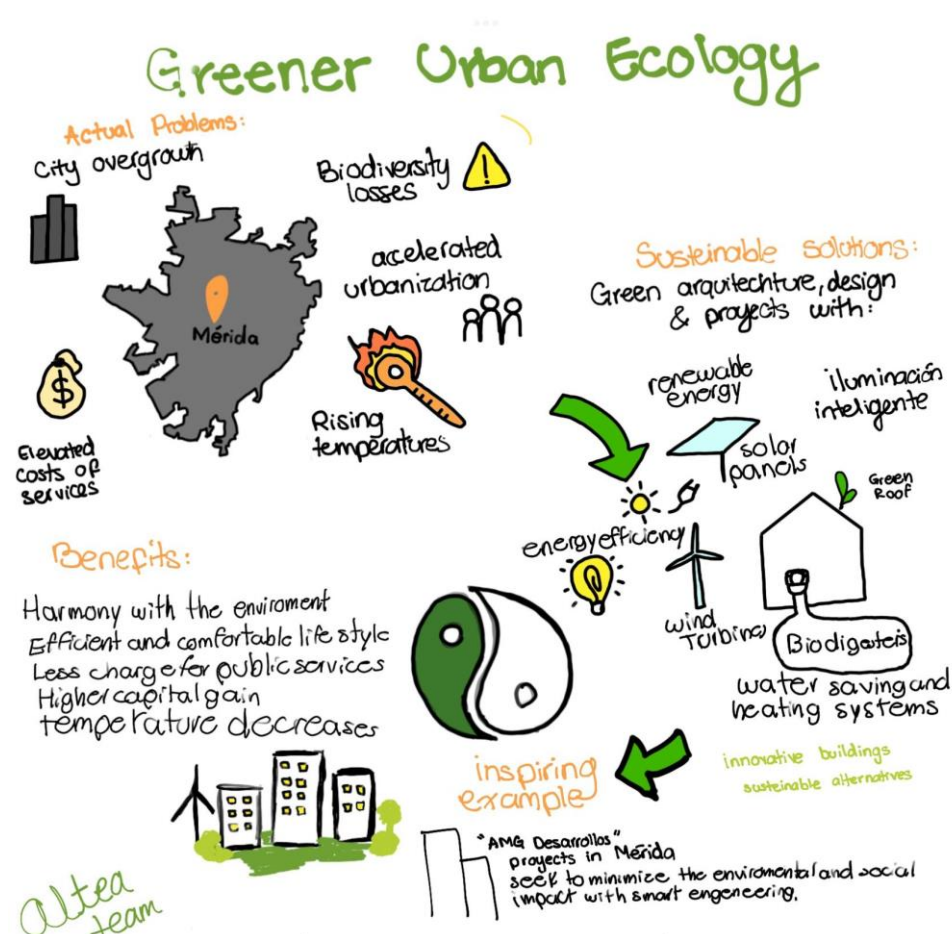

Is not exactly 100% sustainable but there are a few houses that have integrated solar panels to their homes.

- What sustainable solutions do you see in your city, state or country? Tell us about one innovative solution you discovered. What problem does it address and what are the benefits to the community?

For example, in Merida they've added wind energy infrastructures and solar panels at a huge scale, and also they are implementing renewable energy in schools and universities this with an objective to change and become a more sustainable city and state because it addresses the problematic of climate change and with that objective in mind it will benefit the community to have a cleaner energy in their homes and with less cost.

- Create a visual story that identifies the problem and showcases a solution for a unique and inspiring example. Make it persuasive, so others will be encouraged to pursue sustainable alternatives.

Post this visual on Instagram with an informative caption to share with wider audiences! Tag @TurningGreenOrg, @GoingGreenMedia and #PGC2022.
