NURTURE NATURE!

EARTH OVERSHOOT DAY!

Overshoot day is a day in which human demand for resources **exceeds** the Earth's ability to regenerate these resources. We work to **push this date** as far back as possible to ensure that there is a **balance** between how much we take from the environment and how fast it can recover.

Every year, Earth Overshoot Day has come **sooner and sooner.**

HELP PUSH BACK THE DATE!

If we take too much from nature, we should **give back** to it! **Plant native trees/plants** and **grow gardens** in your backyard. Plants reduce the amount of CO₂—a greenhouse gas—in the environment. We require clean air to function, so just planting a few plants can help the environment and you too!

REDUCE YOUR FOOTPRINT!

We can make little changes to our daily lifestyle that have significant implications. These changes go a long way. **Recycle** more waste at home! Replace **incandescent** lightbulbs with energy-efficiently **LED** ones! Use **less hot water** for daily tasks like washing clothes!

environminions2023 Earth Overshoot Day's date is constantly changing and getting closer each year. It is up to us as a society to help push it back! 🌷

We pledge to help #movethedate by giving back to our environment by planting native plants and conserving resources & energy.
