pathto2030

pathto2030 For today's greenest challenge, we wanted to create something familiar, yet creative. We had the idea to create a collage of the earth, made of recycled paper from numerous advertisements that were going to be thrown in the trash. We've taken something already recycled and reused it!

For the final touch, we've converted our earth collage to a sun lamp! Through the light, you can see each individual piece that was painstakingly sought out from each unique page.

All the components used for this project were going to be thrown out, and so we feel we've captured the zero waste aspect of the challenges!
