What is the product called?

Sunscreen Gel by FirstTouch

According to your research, what is its overall hazard rating?

According to EWG's Skin Deep it's 3.

How many ingredients did you find to be potentially hazardous?

one, oxybenzone (also called benzophenone-3)

Share the health and environmental impacts the product is shown to have.

Unfortunately, the major downside of chemical sunscreens is that they contain more harmful ingredients, such as PABA, oxybenzone, and octinoxate. While chemical sunscreens may be less visible on the skin, some chemical UV filters may enter the bloodstream and are linked to health effects such as endocrine disruption and skin irritation. Additionally, they may lead to various toxicological impacts on marine life and coral reefs bleaching. Oxybenzone has also been linked to breast cancer, Hirschsprung's disease, and endometriosis. Additionally, both oxybenzone and octinoxate are known for their harmful effects on coral reefs.

Share the name, brand, and ingredient list from the conscious option and where you found it.

Daily Sheer Mineral Sunscreen Lotion SPF40 by Babo Botanicals.

Active ingredient: Titanium Dioxide 1.9% and Zinc Oxide 15.7%
