FORESTS

Forest management

It's about maintaining the health of the planet. Forest management focuses on managing vegetation, restoring ecosystems, reducing hazards and maintaining forest health.

1. Pre-harvest planning
2. Streamside management zones
3. Timber harvesting
4. Road construction and maintenance
5. Fire management

Restoration methods

Is an intentional human action aimed at reversing forest loss and degradation. Through restoration projects, they seek to recover an ecosystem that has been destroyed.

1. Seedling
2. Agroforestry
3. Natural regeneration

Traditional ecological knowledge (TEK)

Is the accumulation of knowledge, practice and belief about relationships between living beings in a specific ecosystem, that is acquired by indigenous people.
