First, read [this eye-opening article](#) about the fast fashion supply chain. Now that you are beginning to understand the full impact of fashion, let's look more closely at your favorite shirt. Check the tag inside. What information does it provide?

- Record the brand name, materials used, and where it was produced. Pay special attention to the impact this item may have on the people who produced it and the environment.

Our shirt was made by Shein, with 92% polyester and 8% Elastane on the outside, and the lining is 100% polyester. It was made in China. Shein has a specific reputation for lack of workplace safety and respect to workers. They are a high-production-low-quality based company, and so they are not anywhere near being the most sustainable clothing company. We have the shirt because it was donated from a friend, so it was acquired sustainably, but the brand itself is not environmentally conscious. People were not surprised to hear why I was wearing my shirt inside out. A lot of them thought that I messed up and forgot to change my clothes, but when I told them they understood and wanted to hear more about the cause. When people asked, we told them about how the clothing industry is very harmful to the environment and to the workers, and the best way to cheaply buy your clothes is through thrift stores or from your friends' donation piles. @TurningGreenOrg @TrueCostMovie @FashionTakesAction @Fibershed_ @AttireMedia #PGC2023 #fastfashion #WhoMadeMyClothes.
