### Governor Kathy Hochul Support of Renewable Energy

Governor Kathy Hochul just recently announced the largest state investment in renewable energy in United States history for New York with plans to conduct 3 offshore wind projects and 22 land based projects. This project will have \$300 million of state funding and \$668 million of private funding. These projects would deliver 12% of the state's electricity when finished, and generate over 8,000 jobs. These projects are part of reaching the states goal to provide 70% of its electricity from renewable sources. This is exciting news as we are finally taking the steps to a greener future!

### Governor Kathy Hochul Support of Renewable Energy

"An investment of this magnitude is about more than just fighting climate change – we're creating good-paying union jobs, improving the reliability of our electric grid, and generating significant benefits in disadvantaged communities. Today, we are taking action to keep New York's climate goals within reach, demonstrating to the nation how to recalibrate in the wake of global economic challenges while driving us toward a greener and more prosperous future for generations to come."

thegreenestgirlies The topic of renewable energy could not have come on a better day! Yesterday Governor Kathy Hochul announced the largest state investment in renewable energy in United States history for New York State! This funding will go towards not only offshore wind ports but also to land based projects, not only providing a green energy source but also job opportunities for many! Renewable energy is not only green but also great for our economy!
