

Name: Brigitte Elohim-Pinas

Username: brigitteelohimpinas

School: Anton de Kom Universiteit van Suriname

The answers to all questions are in this poem that I also posted as caption to share my learnings with the picture:

Antdutainment

Tiny ants pass knowledge to each other, while we humans use intelligence and support from educated teachers and father and mother.

Without words ants lead the way, and we humans want to learn from them starting today.

Teacher ants adjust their speed, so we humans should learn to do the same to meet our pupils learning needs.

No ant learns the same, so we humans also need to pupil-adjust our teaching game.

The beauty of experienced elder generation passing experience through togethernes, is what human-teaching should never skip.

When the pupil is fully trained, it does not look like a copy of the teacher but it is leveled up by teachers experience and adds that now while it runs its own game.

Never was there a crisis in ants brilliant strategy because every generation gets its tasks done and dusted, so let us humans mimic this strategy because ours is already busted.

Biomimicry is the best way for us humans to learn from nature, and when we apply it we already see how everything is so much better.

The strategy of these ants about how to teach, can make us humans go beyond imaginations no matter what we try to achieve or reach.

Even the Bible says that we should learn from the ants, to meet our needs and our wants.

Tandem running ants symbolize how we should let the elder back down so that the pupils can level up, so let's start tandem running as humans for us to really live at the top.

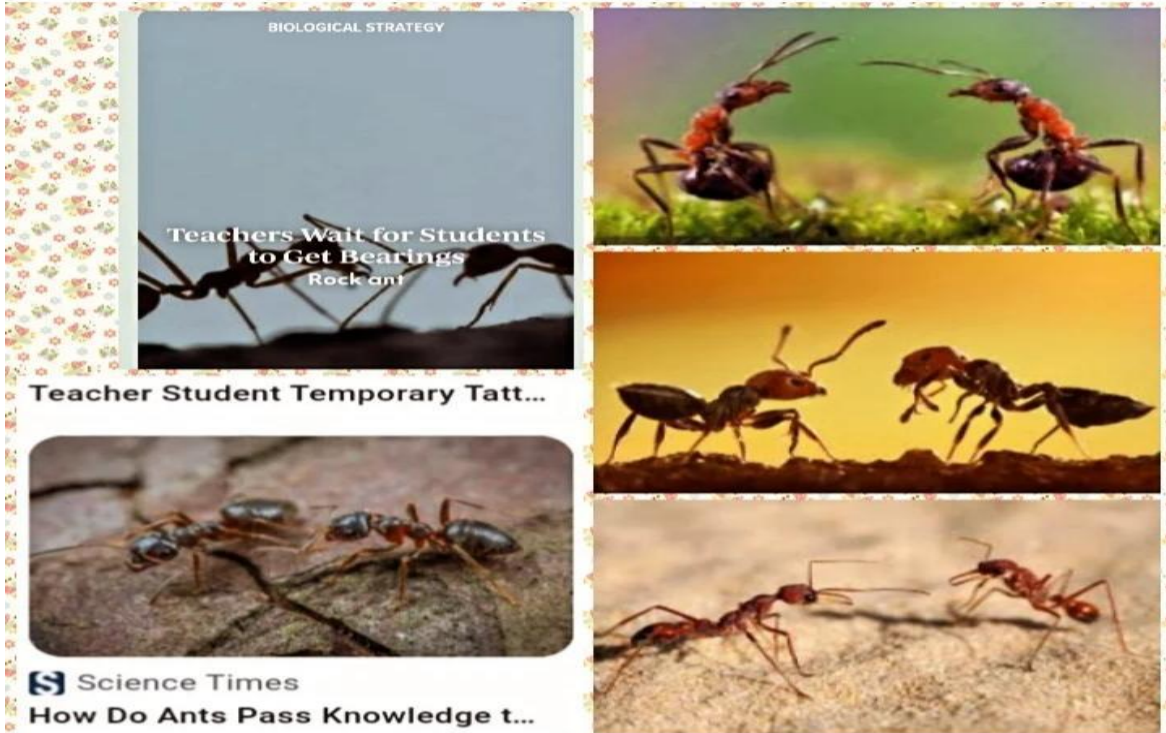

I am inspired by these tiny ants for all this, because it is just what we as intelligent humans need to finally say we have done it! So let's get to start with Antdutainment, the science of learning like an ant by togethernes which is also entertainment.

* I created the term Antdutainment for this task of @turninggreenorg #PGC2023 to express what I learned from tandem running ants: they teach and it is enjoyable for the pupil so it is edutainment by ants and that is Antdutainment.
