Greta Thunberg: We agree with Greta Thunberg's views on climate change because we also agree in implementing policies for helping mitigate climate change. For example, we suggested reducing emissions by promoting incentives for businesses to transition to renewable energy sources. In addition, we suggested targeting larger businesses because they're the most responsible for large carbon footprints and by implementing policies to place a limit on their carbon footprints, we could mitigate climate change drastically. We want to show Greta Thunberg support by sharing her messages actively on social media.

1 **SUSTAINABLE AGRICULTURE**

IT'S IMPORTANT TO USE REGENERATIVE AGRICULTURE BECAUSE IT BENEFITS THE SOIL WHICH IN TURN ALSO BENEFITS THE CROPS, CLIMATE, AND PEOPLE. REGENERATIVE AGRICULTURE REPRESENTS A HOLISTIC APPROACH THAT GROWS A HEALTHIER PLANET, MAKING IT A CRUCIAL TECHNIQUE TOWARDS A MORE SUSTAINABLE FUTURE.

2 **WASTE MANAGEMENT**

Being able to reuse waste is a huge step towards a more sustainable society. By improving recycling and waste policies, there will be less need for excess production in products and factories won't have to release as much carbon for producing those products.

3 **WATER POLICIES**

Clean and accessible water is a fundamental resource for life as a whole. The lack of water is a growing global issue, and I believe I need to take part in protecting this precious resource for current and future generations.

4 **CLIMATE ACTION**

Emission reduction strategies will be put in place as well as renewable energy incentives so businesses will be able to make the switch to renewable energy. By targeting large businesses, carbon levels will be cut down immensely and we'll have a chance in mitigating the effects of climate change.
