# Medicinal Forest in Ambala

Planting neem, amla, giloy, and other native trees on  
cleared land

Sidhi Sareen, GMSSS @prio\_sidhi  
Ayanda Malaza, UCT OHS @Ayanda\_m

# What the initiative is

164 acres of land that were previously encroached by squatters are being restored as a medicinal forest.

Local species like neem, amla, giloy, and other plants are being planted to create a healthy ecosystem. The forest will provide clean air, shade, and resources for the community.

# Why it Matters

Urban areas in Ambala face rising temperatures and pollution. This forest helps reduce heat, improve air quality, and support biodiversity. It also revives important indigenous medicinal plants for future generations.

# Who's Responsible & How Students Can Help

Responsible: Ambala district administration & forest department.

Students can help by : Joining local planting drives Help maintain saplings Spread awareness about the forest on social media
