JARDÍN DE POLINIZADORES

AHUIZOTL

DEL
BOSQUE

Parque Tezozómoc,
Azcapotzalco, CDMX

DID YOU KNOW THERE'S A POLLINATOR GARDEN IN THE HEART OF MEXICO CITY?

The Ahuizotl of the Forest Pollinator Garden is a community-led initiative started by Carlos and followed by his community 8 years ago.

Its mission: restore the local ecosystem by planting native species from the Valley of Mexico, improve soil health, and attract pollinating wildlife.

50+ butterfly species, including the Monarch

Attracted 8 types of native bees and 2 hummingbird species

Improves soil quality, reduces urban heat, and provides a space for relaxation and connection.

Promotes community bonding, environmental education, and a sense of shared responsibility

It all began over 30 years ago with Carlos' grandfather and father. Today, local neighbors help water and care for the space. A example of a community united by nature!

Be patient, change takes time but it's worth it

WANT TO START SOMETHING LIKE THIS IN YOUR NEIGHBORHOOD?

Reach out to specialists in native plants and ecosystems

Ask local authorities about starting a pollinator garden in your area.

Live nearby or know of a similar project in your area?
Offer help and make a difference!
