The Problem

- Families receive water only a few hours a day – or none at all.
- Many rely on unsafe wells or irrigation canals.
- When mudslides hit, pipes break, leaving whole communities without water for weeks.

Fact

In Quirio, 80% of children have suffered stomach or skin diseases from contaminated water.

**+1 million
Peruvians
lack safe
water.**

greentech.team2025 In Chosica, Peru, families are forced to drink unsafe water, walk hours to collect it, or pay unfair prices to private vendors. Every rainy season, huaicos destroy fragile pipes and leave thousands without water. 🚫💧

This is not just an environmental crisis, it is a human rights crisis. Women, children, and low-income families suffer the most.

But there is hope: new reservoirs, treatment plants, and community campaigns are bringing change. 🌍

💧 Water is a right, not a privilege.
