

CHARLES AMOANI- ANTWI

PGC 2025
Participant

About Charles

Charles is a participant in Project Green, who actually joined the 2024 challenge as well! His hometown is Accra, Ghana, and he attends the Kwame Nkrumah University of Science and Technology. His major is computer engineering.

Why did he Join PGC?

He joined Project Green with the Team Sustainovators, a team of 3 from Ghana. He is an engineering student who would love to combine his skills with climate action. As mentioned, Charles participated last year, and was inspired to participate in the challenge again this year! Below is a photo from our zoom call:

How has PGC Inspired You?

PGC has inspired him to be more conscious about how he lives. For example, the water challenge made him realize his water footprint, and to be more cautious when taking showers. It also made him more confident in reaching out to peers and leaders.

What climate change impacts has his community experienced?

His community has experienced overdevelopment, causing pollution and flooding in waterways, leading people to not be able to go to school or their jobs. Rural areas are also polluted by mining activities.

How will PGC inspire your future?

He will use his computer engineering skills to study climate change, by becoming a climate data analyst to predict changes the earth is experiencing.

How did this participant inspire you?

We both agreed that PGC has led us to being more eco-conscious, and I have been inspired to be more confident in reaching out to peers and leaders.
