

NAME: YORM DOGBATSE

USERNAME: amayorm23

SCHOOL: KWAME NKRUMAH UNIVERSITY OF SCIENCE AND TECHNOLOGY

For my Earthshot-inspired project by matter (UK), who has developed REGEN, a breakthrough filtration technology designed to capture microplastics at the point of release.

I envision to create the PlastiDesks Initiative, a youth-led campaign that collects plastic waste and recycles it into desks for schools in need.

This idea was inspired by the work of Plastic Punch, who turn awareness into action through community education and cleanup drives.

My goal is to reduce plastic pollution while improving learning conditions for students, turning waste into opportunity, one desk at a time.
